Delivery

On signing you will be provided with your login credentials that can be used to access our MRSS Platform so you can manually curate content and publish to your Manual Feed. Alternatively your developers can access our content dynamically through our Dynamic MRSS feed with the same credentials via Basic Authentication.

VideoElephant **does not** offer hosting or streaming of our content. The URLs provided for videos and their respective thumbnails are for a one-time download only to be hosted on your servers or file hosting provided by a third party. This applies to both feed delivery methods.

Failure to follow this process may result in additional costs being charged to you and/or a breach of contract under the terms of our agreement.

Dynamic Feed Delivery

VideoElephant's Dynamic MRSS delivers content from our library dynamically via MRSS. This service allows you to seamlessly integrate our content into your platform of choice and will deliver responses containing 50 of the most recent videos from our library in a single request.

> A single request to the endpoint once every 5 minutes will be sufficient to obtain all of our content, assigned to your account, on an ongoing basis, as each request will contain 50 of the latest videos from our library. **Excessive calls will result in your account being blocked.**

The Request

You may access our Dynamic MRSS service using the language of your choice and can test access to your account using curl with the credentials provided to you by your VideoElephant representative. You may also embed the credentials in the URL.

curl -u <username> -p https://mrss.videoelephant.com/mrss

©VideoElephant LTD 2021

The Response

After you have made the request to our Dynamic MRSS Service you will receive an MRSS response as outlined below. Each video and the associated metadata for the video is contained within the <item> element.

Sample XML Response

```
<?xml version="1.0" encoding="UTF-8"?>

            </media:content>
        </item>
    </channel>
</rss>
```

Manual Feed Delivery

The Manual Feed is offered through our MRSS Platform. You can manually curate your own content by searching our library using this Platform and publish this content to an MRSS feed. You have the ability to filter your search by **keyword, content provider** or **duration.** When you have completed your selection of content, you can click **publish** and **view feed.** The URL at the top is your static feed of content for ingestion.

One Manual Feed is provided per account and therefore each time you publish content to the feed you will overwrite the existing content.

Third Party Platform Integrations

VideoElephant has full integration with our VoD partners JWPlayer and Brightcove. Please contact your VideoElephant representative for more information. If you are using any of the above platforms you reporting requirements will be met.

©VideoElephant LTD 2021

Reporting

On a monthly basis, we require the following data:

1. GUID (Global Unique Identifier)
2. Title (VideoElephant's titles must not be altaered)
3. Content Provider Feed Name (which is listed as "media:credit" in the metadata)
4. Plays (Views)
5. Revenue, per Title.

This data should be supplied as a .csv or excel file so it is compatible with our unified reporting system. These are our basic and necessary requirements. Any additional information, such as domains, engagement rates and user metrics is greatly appreciated.
